FERY TOP 31 Containing 31% iron / microgranular

FERY TOP 31 is an absolutely innovative product in the sector of fertilization because of the quality of soluble iron it provides. Thanks to its stated 31% iron percentage. Its formula contains a very high quantity of iron which dissolves in the soil and is made available to the plant.

FERY TOP 31 prevents and treats iron chlorosis when the first symptoms appear: in the top part of the leaves, the area between the veins becomes yellow, whereas the central veins remain green, with poor shoot development and flower coloring. This phenomenon is the consequence of the lack of iron in the soil or its being unavailable for absorption by the roots owing to the presence of limestone in excess and high pH values (basic soil).

- ✓ This product must be used only by mixing it with compost or spreading it on the soil. It should not be used with water or by sewage irrigation.
- ✓ Microgranular product (size: 0,5 -1 mm) whose main components are iron (sulphate) and a stabilizing additive: iron sulphate monohydrated molecule.
- ✓ It remains stable in time even for many months if kept in its original packaging, without lumping, crumbling, oxidizing, or losing its effects and chemical properties.
- ✓ It does not release bad smells and moisture when stored in a warehouse; it can be mixed with other microgranular and granular fertilizers, as well as fertilizers in flakes.
- ✓ It releases iron gradually during the vegetative cycle of the plant; the time recommended for treatment is autumn-spring.
- ✓ It acidifies and corrects alkaline soils reducing the pH value of the solution circulating in the soil, as it provides a great quantity of sulphuric anhydride (SO₃)

Total iron (Fe) soluble in water	31	%
Sulphuric Anhydride (SO ₃) soluble in water	45	%
Relative density at 20°C	1,3	kg/l
pH value	2,5	

Heavy metals: Pb < 0,5 ppm
Cu < 0,5 ppm
Other metals: absent or traces

Packaging:
25 kg bags on a 1.500 kg pallet
